# KIT & GSPro Auto-Putt Setting

This document is designed to help with setting the Auto-Putt for a KIT on the GSPro application before starting a round of golf. KIT does not track putting, change this setting per every round of golf if not already preset.

1. Within the **GSPro Application,** when starting a round of golf, open the **Match Settings**.

2. Change the **Match Settings** to the following:

    - **Gimmie/Auto Putt – AutoPutt Fixed**

3. Place the **KIT** 8 -10" from the hitting mat.

4. **Begin Playing!**

NOTE: **Wi-Fi** to the laptop is crucial for these two technologies to connect; ensure you have good signal when operating the **Full Swing KIT Studio**.
